We select sub-advisers we expect to use for the long term, and employ an ongoing review process to ensure they continue to meet our criteria. BlackRock Investment Management, LLC invests in equity securities with the objective of approximating the capitalization weighted total rate of return of the segments of the United States market for publicly traded equity securities as represented by the Russell Midcap® Growth Index and the Russell 2000® Growth Index.

Champlain Investment Partners, LLC seeks capital appreciation by investing in common stocks of medium-sized companies that it believes have strong long-term fundamentals, superior capital appreciation potential, and attractive valuations. Champlain expects to identify a diversified universe of medium-sized companies that trade at a discount to their estimated or intrinsic fair values.

ClearBridge Investments, LLC invests primarily in mid capitalization companies. The team invests in stocks selected for their longterm growth potential. The portfolio managers conduct bottom-up, fundamental research and look for attractive valuations, favorable growth and attractive risk/reward profiles, and strong free cash flow and balance sheets.

Eagle Asset Management, Inc. invests primarily in small capitalization companies. The team focuses on investing in companies that demonstrate growth potential at a price that does not appear to reflect the company's true underlying value. The portfolio managers use a three-pronged investment philosophy: quality, valuation, and balance.

Stephens Investment Management Group, LLC employs a disciplined, bottom-up investment selection process that combines rigorous fundamental analysis with quantitative screening in an effort to identify companies that exhibit potential for superior earnings growth that is unrecognized by the markets.

The Fund's investment objectives, risks, charges and expenses must be considered carefully before investing. Mutual fund investing involves risk. The value of your investment in the Fund could go down as well as up. Investments in small and mid-cap companies may involve additional risks such as limited liquidity and greater volatility than larger companies. Multi-manager and multi-style management may lead to overlapping securities transactions and higher transaction expenses compared to single investment management styles. Outcomes depend on the skill of the sub-advisers and adviser and the allocation of assets amongst them.

Free Cash Flow is a measure of financial performance calculated as operating cash flow minus capital expenditures. Free cash flow (FCF) represents the cash that a company is able to generate after laying out the money required to maintain or expand its asset base. Free cash flow is important because it allows a company to pursue opportunities that enhance shareholder value. Without cash, it's tough to develop new products, make acquisitions, pay dividends and reduce debt.
